CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali, e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di gennaio è notevolmente inferiore alla normale. La differenza nelle singole località è di poco inferiore ai 3° nella Venezia Giulia e lungo il mare, supera i 3° altrove, sino a raggiungere i valori estremi -4°,1 a Belluno e -4°,5 a Padova.

Osservatorio	Pisino	Trieste	Gorizia	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura										
Massima . . .	7,8	10,4	9,9	6,5	7,7	7,5	3,4	6,5	8,0	6,1
Minima . . .	-15,9	-2,9	-6,6	-6,4	-6,3	-10,8	-5,9	-14,4	-13,7	-11,2
Media mensile .	0,8	2,4	0,9	0,5	0,5	-2,0	-2,1	-2,0	-4,4	-2,5
Valore normale	2,9	5,2	3,7	3,4	3,3	2,5	1,6	1,9	0,3	0,7

La temperatura nel suo andamento generale ha subito forti variazioni; un minimo, il più importante nella pianura veneta, si presenta verso il 10-11; un'ondata di freddo segue tra il 15 e il 23 con due minimi relativi al principio e alla fine di questo periodo, e infine un altro minimo si nota il 30. La massima assoluta del mese si registra il 2 nel Veneto, il 26 nella Venezia Giulia.

La minima assoluta si nota in vari giorni: il 10-11 nel Veneto, il 23 nel Carso e in Istria, il 28-30 altrove. Valori molto bassi ha raggiunto la minima assoluta nell'Istria (Pisino -15,9) e nella pianura Veneta (Rovigo -14,4).

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.) si rileva che la temperatura minima è al Venda superiore a quella di Padova in 22 giorni; in 13 di questi giorni la differenza supera i 3°, in 5 giorni, poi, essa supera i 6°; la differenza massima di 10°,2 si nota il giorno 11. Queste differenze si fanno sentire anche nella media che in 15 giorni al Venda risulta più alta di quella di Padova.

Infine anche la massima giornaliera al Venda è superiore a quella di Padova in 2 giorni, con massima differenza di 2°,4 l'11.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate medie decadiche e mensili della temperatura, ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione, distribuite in vari gruppi secondo la loro quota.

2) **Nebulosità.** - Nella media mensile la nebulosità è inferiore al valore normale nella pianura Veneta, superiore altrove.

Gli estremi delle differenze sono: -0,8 (Venezia) e +0,8 (Belluno). La II decade è stata la più coperta nella Venezia Euganea (media decadica tra 5,9 (Venda) e 7,6 (Rovigo), come conseguenza anche delle numerose nebbie; altrove è la III. Piccola è la differenza tre le altre due decadi.

Osservatorio	Pisino	Trieste	Gorizia	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità								
Media mensile . .	6,2	5,9	5,9	5,6	6,5	6,1	5,2	5,2
Valore normale .	6,1	5,9	5,7	6,4	6,5	6,8	4,4	5,1

3) **Vento.** - La media mensile della velocità del vento è superiore al normale a Venezia, Padova, Trento e Udine; è inferiore a Trieste. Vento di bora notevole a Venezia si rileva dal 5 all'8 e dal 12 al 14. Giornata molto ventosa è il 6 con media di 48,7 km/h. a Trieste e 59,0 a Venezia, direzione da ENE; in quel giorno la massima oraria a Venezia è 82 km. da ENE, dalle 8^h alle 9^h.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	12,1	15,4	18,9	5,3	6,8
Valore normale . .	15,7	13,4	13,7	4,4	4,6

4) **Pressione atmosferica (1).** - La media mensile della pressione atmosferica è di mm. 757,3; essa è di mm. 6,4 inferiore al valore normale.

L'altezza massima, di mm. 768,1 si registra alle 21^h del 2; l'altezza minima, di mm. 745,7, alle 19^h del 15; si ha quindi una escursione di mm. 22,4 che è di 4,3 mm. inferiore alla escursione media di gennaio.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita le più caratteristiche del mese.

DISCESA								SALITA							
Inizio		Durata ore	Pressione		Discesa totale mm.	Discesa oraria mm.		Inizio		Durata ore	Pressione		Salita totale mm.	Salita oraria mm.	
Giorno	Ora		Da mm.	A mm.				Giorno	Ora		Da mm.	A mm.			
19	9	6	751,3	745,7	5,6	0,93		12	15	6	759,2	762,9	3,7	0,61	
2	22	64	768,1	750,9	17,2	2,7		28	8	50	751,3	767,8	16,5	0,33	

5) **Precipitazioni atmosferiche.** - Le precipitazioni, iniziate il 5, sono continuate, ad intervalli, sino al 28.

Non sono state continue, ma si sono presentate a gruppi di 2-5 giorni, disseminati qua e là in modo che si può dire che ben pochi siano i giorni nei quali almeno in uno o più posti del compartimento non sia caduta neve o pioggia. Salvo pochi giorni lungo le coste, la neve o da sola o accompagnata da pioggia non è mai mancata.

Le precipitazioni presentano valori notevoli nel bacino del Bacchiglione e dell'Agno il 14 (gp) con mm. 40,5 a Schio, e mm. 42,4 a Recoaro. Più generali sono le copiose precipitazioni del 26: Udine mm. 56,2, Belluno mm. 33,0, Tai di Cadore mm. 32,0, S. Michele all'Adige mm. 32,2, e il 27 (gp): Plezzo mm. 75,3, Tarvisio mm. 57,0, Drenchia mm. 96,3, Musi mm. 150,3 - totale giornaliero massimo della regione -, Gemona mm. 90,3, Clauzetto mm. 64,6, Recoaro mm. 46,0; dappertutto allo stato di neve.

Dall'ispezione alla carta delle precipitazioni mensili appare come la

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido) e sono ridotti a 0° ed al livello del mare.

quantità minima delle precipitazioni, inferiore a 50 mm., sia caduta nella zona delle Alpi Tridentine con un minimo, inferiore a 10 mm., nella Val Venosta. Sono caduti oltre 100 mm. sulle Alpi Giulie e lungo le coste occidentali istriane. Aree di massimo, racchiuse dall'isoietta 150 mm. sono: una che comprende le sorgenti del Leogra e dell'Agno (Campo d'Albero mm. 185 - totale mensile massimo della regione - Recoaro mm. 147,0 e altre minori nel bacino dell'Isonzo attorno a Musi, mm. 179, a Bergogna, mm. 154, a Drenchia, mm. 156.

Confrontando il totale mensile col valore normale si riscontra che nella pianura Veneta le precipitazioni sono maggiori: il rapporto è 2,00 a Rovigo, 1,57 a Venezia; il rapporto va diminuendo man mano che ci si sposta verso le Alpi a levante (Udine 0,92) o a settentrione (Trento 0,76, Silandro 0,28). Le precipitazioni tutte furono nevose o neve e pioggia, anche in pianura.

REGIME DEI CORSI D'ACQUA.

Durante il mese i corsi d'acqua presentano il solito regime invernale: i livelli sono generalmente in lieve decrescenza dall'inizio alla fine del mese, anche per la mancanza di precipitazioni sotto forma di pioggia.

Le massime altezze idrometriche si registrano, in generale nei primi giorni del mese; le minime, invece, nella terza decade.

Nel seguente prospetto, per alcuni corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km ²	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.

Adige	Boara Pisani .	11954	11	187	121	29	215	88,0

MAREOGRAFIA.

Le altezze di marea registrate nel bacino di S. Marco (Punta della Salute) si scostano sensibilmente in eccesso dalle previsioni dal giorno 5 al 14, con scostamenti che superano anche i 50 cm.

Altro periodo con eccessi degni di nota va dal 19 al 26. Negli altri giorni del mese la marea registrata si mantiene intorno ai valori previsti con piccoli scostamenti in più od in meno.

(1) I valori delle portate non comprendono le portate derivate dal Piave a Soverzene: perciò non viene calcolato il valore del contributo.

(2) Le portate sono quelle effettivamente defuite alla sezione di misura e prescindono dalle portate derivate a Longare; non viene pertanto calcolato il valore del contributo.

(3) Le portate sono quelle effettivamente defuite alla sezione di misura e prescindono dalle portate derivate a monte per irrigazione ed altri usi; non viene pertanto calcolato il valore del contributo.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della Regione, le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali, e sono inoltre riportati gli estremi termometrici mensili si rileva che la media mensile di febbraio è inferiore alla normale, nella pianura veneta, superiore altrove. Le differenze, sia quelle positive come quelle negative, sono di pochi decimi di grado.

Osservatorio	Pisino	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura									
Massima . . .	19,2	12,8	16,3	11,5	15,7	12,7	13,7	16,1	21,6
Minima . . .	- 7,7	0,4	- 0,9	- 2,3	- 6,3	- 3,7	- 3,2	- 9,7	- 5,5
Media mensile .	3,5	5,8	5,3	4,1	2,9	3,4	3,2	0,3	- 3,4
Valore normale	3,2	5,5	4,5	4,4	3,7	1,2	3,7	1,4	2,9

La temperatura, nel suo andamento generale, dopo il forte minimo della fine del gennaio, sale rapidamente, e continua la sua salita per tutto il mese, presentando però due minimi relativi: uno verso il 9-10 e l'altro verso il 18-20.

La massima assoluta del mese si registra il 16 a Venezia e a Trieste, il 27 e il 28 nelle altre località.

La minima assoluta si nota il 20 o il 21 nella Venezia Giulia, nei giorni 1 o 2 altrove.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.) si rileva che la temperatura minima è al Venda superiore a quella di Padova in 25 giorni; in 9 di questi la differenza supera i 3°; in 2 giorni poi essa è superiore a 5°. La differenza più forte (7°,7) si ha il 28. Queste differenze si fanno sentire anche nella media, che in 16 giorni, al Venda, è superiore a quella di Padova.

In 5 giorni la massima al Venda è superiore a quella di Padova; ciò denota che l'inversione persiste ininterrottamente per le 24 ore; dal 3 al 6 essa durò per 4 giorni consecutivi.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate medie decadiche e mensili della temperatura, ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione, distribuite in vari gruppi secondo la loro quota.

REGIONE	Quota sul mare metri	DISCESA

	Media mensile . .	2,7	1,1	2,5	1,1	- 1,2	- 0,1	0,3	- 1,2	- 4,3	

2) **Nebulosità.** - Nella media mensile la nebulosità è quasi dappertutto superiore al valore normale.

Gli estremi delle differenze sono - 0°,3 a Venezia, 0°,3 a Padova, 1°,0 a Trieste.

La I decade è la più coperta (media decadica tra 5,8 a Trento e 9,0 a Rovigo); la decade meno coperta è la III (media decadica 2,9 a Udine, 5,0 a Trieste).

Osservatorio	Pisino	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità							
Media mensile . .	6,4	6,5	5,4	6,4	5,8	4,8	4,8
Valore normale . .	5,6	5,5	5,7	5,9	5,5	4,2	4,9

3) **Vento.** - La media mensile della velocità del vento è inferiore al normale. Vento molto debole in tutto il mese si registra a Udine e a Venezia, dove la media giornaliera ha superato i 20 km. una volta sola; a Trieste mai.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	2,4	7,3	»	2,0	4,5
Valore normale . .	17,6	14,0	14,9	5,1	5,2

4) **Pressione atmosferica (1)** - La media mensile della pressione atmosferica è di mm. 761,2; essa supera il valore normale di mm. 6,6.

L'altezza massima, di mm. 778,7, si rileva alle 22^a del 19; l'altezza minima, mm. 757,8, alle 7^a del 12. Si ha, pertanto, una escursione di mm. 20,9 che è di 6,5 mm. inferiore alla escursione media di febbraio.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA							SALITA						
Inizio		Durata ore	Pressione		Discesa totale mm.	Discesa oraria mm.	Inizio		Durata ore	Pressione		Salita totale mm.	Salita oraria mm.
Giorno	Ora		Da mm.	A mm.			Giorno	Ora		Da mm.	A mm.

10	10	44	764,7	757,8	6,9	0,16	12	8	62	758,0	769,5	11,5	0,19

5) **Precipitazioni atmosferiche.** - Le precipitazioni si verificano sin dal principio del mese nella parte orientale del compartimento, però in quantità piccola; si fanno più generali nei giorni 10-11-12; il giorno 12 in talune località caddero un po' più copiose: difatti in quel giorno si registra a S. Giacomo (Val Aurina) mm. 71,2 — massimo giornaliero della regione — a Resia mm. 55,2, a Rasun di Sotto mm. 40,0. Nel resto del mese si notano pochi decimi in qualche località.

Le precipitazioni presentano valori notevoli solo nella Val Venosta (Silandro rapporto 1,18); altrove, sia in pianura come in montagna, sono scarsissime; quasi ovunque il totale mensile è inferiore al decimo di valor normale.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido) e sono ridotti a 0° ed al livello del mare.

Stazione	Pisino	Trieste	Pieve	Torviscosa	Udine	Venezia (Lido)
Precipitazioni						
Totale mensile	16,0	6,7	7,0	»	2,2	0,0
Valore normale	68,3	44,6	175,7	66,0	55,3	41,3
Rapporto . . .	0,23	0,15	0,04	»	0,04	—

Stazione	Padova	Rovigo	Belluno	Recoaro	Silandro	Trento
Precipitazioni						
Totale mensile	1,2	2,6	2,0	2,4	31,7	0,6
Valore normale	51,3	42,0	50,2	128,0	27,0	43,7
Rapporto . . .	0,02	0,05	0,04	0,02	1,18	0,01

Dall'ispezione alla carta delle precipitazioni mensili appare come nella maggior parte del compartimento sono caduti meno di 10 mm.; tale limite è superato nell'estremità nord-occidentale della zona montuosa, nell'Istria e nel Carso. Nella Val Venosta e a nord della medesima sono superati i 25 mm.; a Resia si notano mm. 79,9 — totale mensile massimo della regione — a Fleres mm. 69,0, a S. Giacomo (Valle Aurina) mm. 71,0. Nell'Istria sono superati i 25 mm. in una striscia comprendente i monti della Vena.

Il manto nevoso al principio del mese s'aggira attorno al metro di spessore alla quota di mille metri nella parte orientale; nelle Alpi Tridentine, invece, è di 50-70 cm. Il metro di spessore, e in qualche posto anche più, si rileva alla quota di 2000 metri.

Continua la diminuzione del manto nevoso nel corso del mese, diminuzione rallentata per alcuni giorni dal rifornimento verificatosi tra il 10 e il 12; rifornimento che è inferiore ad una decina di cm. alle quote maggiori, appena avvertito alle quote inferiori.

Alla fine del mese nella parte orientale, a 1000 m., la neve al suolo è quasi scomparsa del tutto; nelle Alpi Tridentine lo spessore del manto nevoso è ridotto a 10-20 cm.; alle quote di 2000 m. dai 50 ai 70 cm.

REGIME DEI CORSI D'ACQUA.

Durante il mese i corsi d'acqua, in relazione alla deficienza di precipitazione, che per lo più si sono verificate sotto forma di neve, non presentano oscillazioni di livello degne di rilievo.

Nel seguente prospetto, per alcuni corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio kmq.	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.

Adige	Boara Pisani .	11954	4	207	96,5	24	224	79,0

MAREOGRAFIA.

In linea generale le altezze di marea registrate nel bacino di S. Marco (Punta della Salute) sono inferiori alle previsioni. Gli scostamenti sono di modesta entità nella prima quindicina mentre presentano valori più elevati nella seconda metà del mese.

(1) I valori delle portate non comprendono le portate derivate dal Piave a Soverzene: perciò non viene calcolato il valore del contributo.

(2) Le portate sono quelle effettivamente defluite alla sezione di misura e prescindono dalle portate derivate a Longare; non viene pertanto calcolato il valore del contributo.

(3) Le portate sono quelle effettivamente defluite alla sezione di misura e prescindono dalle portate derivate a monte per irrigazione ed altri usi; non viene pertanto calcolato il valore del contributo.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di marzo è superiore alla normale. La differenza è di pochi decimi lungo le coste, supera il grado altrove, raggiunge 2° a Trento.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Massima . . .	20,9	19,8	17,0	20,5	17,1	20,9	20,8	22,2
Minima . . .	1,8	0,6	0,4	- 1,5	- 1,8	- 0,4	- 3,8	- 1,3
Media mensile .	9,3	9,5	9,1	9,2	7,5	9,6	7,7	9,8
Valore normale	8,9	8,2	8,4	8,2	5,6	8,3	6,0	7,4

La temperatura, nel suo andamento generale, dopo il forte aumento della fine di febbraio, al primo di marzo scende rapidamente, ma nei giorni successivi riprende a salire e continua la sua salita per tutto il mese, presentando però dei minimi relativi; il più notevole di tutti, specie nel Trentino, è verso il 25.

La massima assoluta del mese si registra il 31 a Venezia e a Trieste, nei giorni dal 22 al 24 nelle altre località.

La minima assoluta si nota nei primi giorni del mese e precisamente dal 4 all'8.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima al Venda è superiore a quella di Padova in 21 giorni; in 10 di questi la differenza supera i 3° e in 2 giorni i 5°. La differenza più forte (6°) si ha il 25. Queste differenze si fanno sentire anche nella media giornaliera in guisa tale che in 2 giorni la media al Venda è superiore a quella di Padova.

La massima al Venda risulta sempre inferiore alla massima di Padova; ciò denota che l'inversione è durata solo una parte della giornata, precisamente nelle ore più calde.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura, ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

REGIONE	Quota sul mare metri	VENEZIA GIULIA

	Media mensile . .	9,6	7,6	7,4	5,2	3,0	3,0	1,1	- 1,8

2) **Nebulosità.** - Nella media mensile la nebulosità è dappertutto inferiore al valore normale.

Gli scostamenti sono compresi tra 0,5 a Belluno, 2,3 a Trento e 2,6 a Rovigo.

La II decade è generalmente la meno coperta (media decadica tra 1,5 a Rovigo e 4,9 a Padova); la decade più coperta è la I nella Venezia Giulia (media decadica 4,6 ad Udine e 5,5 a Trieste), la III altrove (4,7 a Rovigo, 6,9 a Padova).

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	4,4	4,4	5,4	3,2	4,6	3,4
Valore normale .	6,0	6,0	6,2	5,8	5,1	5,7

3) **Vento.** - La media mensile della velocità del vento è inferiore al normale. Il vento è molto debole in tutto il mese; la media giornaliera supera i 20 Km/ora una volta sola a Venezia, il 27 (media giornaliera 42,9 direzione prevalente da ENE).

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	3,4	9,3	•	4,6	6,8
Valore normale . .	14,1	14,1	16,0	6,2	6,0

4) **Pressione atmosferica (1)** - La media mensile della pressione atmosferica, mm. 767,6, supera il valore normale di mm. 6,8.

L'altezza massima, di mm. 773,2 si registra alle 1^h del 10; l'altezza minima, mm. 758,7, alle 15^h del 7; si ha, pertanto, una escursione di mm. 14,5, che è di mm. 11,7 inferiore alla escursione media, del mese di marzo.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA						SALITA					
Inizio		Durata ore	Pressione		Differenza totale mm.	Differenza oraria mm.	Inizio		Durata ore	Pressione	
Giorno	Ora		Da mm.	A mm.			Giorno	Ora		Da mm.	A mm.
4	12	4	769,1	765,0	4,1	1,03	9	18	4	769,0	771,5
1	11	29	770,9	761,7	9,2	0,32	7	15	58	758,7	773,2

5) **Precipitazioni atmosferiche.** - Le precipitazioni si registrano in piccole quantità e in poche località nei giorni 8 e 9; più diffuse e più abbondanti sono nei giorni dal 26 al 29. Difatti il 27 si notano mm. 19,0 al Venda, mm. 80,0 a Possagno, mm. 42,4 a Belluno, mm. 47,4 a Tai di Cadore, mm. 35,2 a Trento; il 28 (gp) mm. 60,3 a Plezzo, mm. 73,2 ad Ampezzo, mm. 250 a Diga Cellina - totale giornaliero massimo del mese - mm. 123,8 a Tramonti di Sopra, mm. 71,0 a Gosaldo, mm. 82,8 a Pedesalto, mm. 95,2 ad Asiago, mm. 233,4 a Staro, mm. 209,0 a Lambre d'Agni, mm. 57,5 a Cles, mm. 37,1 a Silandro.

Le precipitazioni mensili hanno raggiunto valori notevoli solo nel medio ed alto Adige (Silandro rapporto 1,24); altrove, sia in pianura che in montagna, sono state scarsissime; quasi dappertutto il totale mensile è inferiore a metà del valor normale.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido) e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Plezzo	Udine	Venezia (Lido)	Padova
Precipitazioni					
Totale mensile	9,2	112,5	33,2	18,4	29,6
Valore normale	79,0	221,6	125,3	67,1	75,8
Rapporto . .	0,12	0,51	0,27	0,27	0,39

Stazione	Rovigo	Recoaro	Belluno	Silandro	Trento
Precipitazioni					
Totale mensile	10,2	71,3	68,4	37,1	73,4
Valore normale	51,8	200,0	95,4	30,0	64,4
Rapporto . .	0,20	0,36	0,72	1,24	1,14

Dall'ispezione alla carta delle precipitazioni mensili appare come nella parte meridionale della pianura veneta e nell'Istria occidentale, Carso compreso, sono caduti meno di 25 mm. Lungo il corso inferiore del Po sono cadute meno di 10 mm.

L'isoietta 25 passa tra Berici e Euganei e va a finire alla foce del Piave. Nella parte orientale l'isoietta 25 abbraccia le foci dell'Isonzo, sale nell'interno del Carso, costeggia il Piave e poi scende nell'Istria e va alla foce dell'Arsa. Nella zona montuosa caddero meno di 25 mm. nel bacino dell'Isarco e in un'area ristretta sul Noce, vicino alle sorgenti del medesimo.

La solita fascia dei massimi, orientata da SW a NE, racchiusa dalla isoietta 100 mm., comprende varie piccole aree con oltre 200 mm.: una tra le sorgenti dell'Agno e quelle del Leogra (Lambre d'Agni mm. 261, Staro mm. 273), un'altra a cavallo del Brenta ad oriente d'Asiago (Sasso d'Asiago mm. 219), un'altra tra le pendici settentrionali del Grappa e Feltre (Seren del Grappa mm. 228), e un'ultima, la più estesa delle precedenti e la più importante, comprende le sorgenti del Cellina e del Meduna (Chievolis mm. 212, Diga Cellina mm. 293 - totale mensile massimo della regione).

Le precipitazioni tutte, in pianura, sono allo stato di pioggia; nell'alta valle dell'Adige furono tutte nevose; nel resto della zona montuosa solo nell'ultimo periodo piovoso del mese alle quote maggiori caddero allo stato di neve.

Mancano notizie precise sullo spessore della neve nella zona montuosa.

REGIME DEI CORSI D'ACQUA.

I livelli dei corsi d'acqua, sono, in generale, stazionari fino al 25. Dopo tale giorno, per effetto delle precipitazioni, si ha un sensibile incremento che porta a registrare le massime altezze idrometriche nei giorni 28 o 29.

Nel seguente prospetto, per i principali corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km ²	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.
Tagliamento	Pioverno . .	1900	29	114	125	1	77	54,3

Adige	Boara Pisani .	11954	29	•	277 ⁽¹⁾	1	•	92,0 ⁽¹⁾

MAREOGRAFIA.

Le altezze di marea registrate nel bacino di S. Marco (Punta della Salute) sono durante quasi tutto il mese inferiori alle previsioni e presentano scostamenti fino 40 cm. circa.

Solo nei giorni 27 e 28, per l'influenza dei fattori meteorologici, le altezze di marea superano le previsioni con un eccesso massimo, il giorno 28, di circa 35 cm.

(1) I valori delle portate sono calcolati con riferimento all'idrometro di Boara Polensine.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) *Temperatura.* - Dal prospetto seguente nel quale, per i principali Osservatori della regione, le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali, e sono inoltre riportati gli estremi termometrici, mensili, si rileva che la media mensile di questo aprile è superiore alla normale. La differenza è di 1° a Trieste, s'aggira attorno ai 2 gradi altrove; in qualche località raggiunge 2°,5 (al Venda e a Belluno).

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	21,7	23,1	21,2	26,9	22,7	27,5	27,0	27,3
Minima . . .	8,0	6,8	8,0	5,4	3,3	5,0	0,3	3,6
Media mensile .	13,9	13,6	14,2	14,0	11,5	14,4	12,2	13,7
Valore normale	12,8	11,7	12,3	12,3	9,0	12,4	9,7	11,5

La temperatura nel suo andamento generale, dopo il forte aumento del mese di marzo, in aprile si mantiene quasi sempre ad uno stesso livello con tre oscillazioni importanti, i cui minimi relativi trovansi attorno al giorno 10, verso il 17-18 ed 22-24. Termina il mese accennando ad una notevole diminuzione.

La massima assoluta del mese è stata segnata il 10 a Venezia, nei giorni da 19 al 20 altrove.

La minima assoluta è stata segnata l'8 a Belluno al Venda e Padova, il 22 o il 23 altrove.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s.l.m.) ed al Venda (m. 575 s.l.m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 18 giorni; in 6 di questi giorni la differenza eguaglia o supera i 3°, in 2 giorni poi non fu inferiore a 5°; la differenza più forte (6°,2) si nota l'11.

Queste differenze si fanno sentire nella media di un solo giorno (19), in cui la media al Venda fu superiore a quella di Padova.

Mai la massima al Venda fu superiore a quella di Padova e ciò indica che l'inversione è durata solo una parte della giornata, nelle ore meno calde.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

2) *Nebulosità.* - Nella media mensile la nebulosità è dappertutto inferiore al valore normale. Gli estremi delle differenze sono 0,7 a Padova, 1,9 a Rovigo e a Venezia.

La decade meno coperta nella parte orientale è stata la II, altrove la prima (media decadica tra 2,7 a Rovigo e 4,6 a Padova); la decade più coperta è la III (media decadica 5,6 a Rovigo e 6,9 a Trieste e a Padova).

Media mensile . . .	5,5	11,2	15,9	5,6	5
Valore normale . .	11,8	13,0	16,5	6,6	7,1

4) *Pressione atmosferica (1).* - La media mensile della pressione atmosferica è mm. 762,1; essa supera il valore normale di mm. 3,1.

L'altezza massima, di mm. 770,5, si registra alle 8^h del 22; l'altezza minima, mm. 748,4, alle 22^h dell'8. Si ha, quindi, un'escursione di mm. 22,1, che è di mm. 1,2 superiore alla escursione media di aprile.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA							SALITA						
Giorno	Ora	Durata ore	Pressione		Differenza totale mm.	Differenza oraria mm.	Giorno	Ora	Durata ore	Pressione		Salita totale mm.	Salita oraria mm.
			Da mm.	A mm.						Da mm.	A mm.		
21	22	5	753,1	749,6	3,5	0,70	4	4	6	758,0	762,3	4,3	0,72
20	23	33	762,4	748,4	14,0	0,42	13	20	64	760,3	770,5	10,2	0,16

5) *Precipitazioni atmosferiche.* - Un periodo di precipitazioni abbastanza generali e di qualche importanza ha inizio il giorno 27; precedentemente le precipitazioni sono in generale deboli e disseminate nella regione. Degne di qualche attenzione sono quelle del g. pl. 4, in cui a Plezzo si notano mm. 24,5, a Clausetto mm. 26,6, a Cimolais mm. 90,9 - totale giornaliero massimo del mese -. Il 27 caddero mm. 36,0 a Padova, mm. 35,0 al Venda; il 29 (g. pl.) mm. 61,5 a Plezzo, mm. 76,1 a Musi, mm. 76,8 a Vedronza.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido) e sono ridotti a 0° ed al livello del mare.

Dal confronto tra il totale mensile e il valore normale risulta che in pochi luoghi il primo è stato superiore al secondo (Rovigo rapporto 1,13); per lo più è stato inferiore (rapporto 0,96 a Padova, 0,90 a Trieste, 0,96 a Plezzo); il rapporto è sceso al di sotto di un terzo nella zona montuosa, specie nell'alto Adige (Trento 0,31, Silandro 0,27).

Stazione	Trieste	Plezzo	Udine	Venezia (Lido)	Padova
Precipitazioni					
Totale mensile	81,1	160,7	84,4	22,2	50,2
Valore normale	89,8	167,4	134,3	66,1	82,2
Rapporto . .	0,90	0,96	0,63	0,34	0,86

Stazione	Rovigo	Recoaro	Belluno	Silandro	Trento
Precipitazioni					
Totale mensile	65,8	5	49,0	8,0	26,3
Valore normale	57,9	201,0	123,2	31,0	82,4
Rapporto . .	1,13	—	0,40	0,27	0,31

Dall'esame della carta delle precipitazioni mensili appare come i 200 mm. siano stati superati in vari posti tra l'Isonzo e il Torre (Monte-maggiore mm. 248 - totale mensile massimo della regione - Musi mm. 224), nell'alto Cellina (Cimolais mm. 210). Caddero meno di 50 mm. sulla punta meridionale dell'Istria, su tutta la pianura Veneta tranne tra il Bacchiglione e il Brenta e la parte montana del loro bacino, dove caddero tra i 50 e i 60 mm., e in tutta la zona montuosa ad ovest del Piave, dove in un'area non tanto ampia attorno al Marmolada furono superati i 50 mm.

Le minori precipitazioni (meno di 10 mm.) caddero nella Val Venosta. Mancano notizie sul manto nevoso.

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli dei corsi non presenta oscillazioni degne di nota durante il mese. Lievi variazioni nelle altezze idrometriche si notano, solo in corrispondenza delle scarse precipitazioni verificatesi, soprattutto verso la fine del mese.

Nel seguente prospetto, per i principali corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di drenaggio Km ²	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.
Tagliamento	Pioverno . .	1900	1	114	125	17	85	62,6
Piave	Segusino . .	3333	18	158	116	8	121	44,4
Bacchiglione	Montegaldella .	1384	29	57	19,0	7	9	10,4
Adige	Boara Pisani .	11954	28	5	199 (1)	11	5	150 (1)

MAREOGRAFIA.

In linea generale la marea registrata nel bacino di S. Marco (Punta della Salute) è inferiore alle pressioni nelle prime due decadi del mese.

Nella terza decade, invece, si registrano maree superiori al previsto. In ogni caso gli scostamenti sono lievi, presentando massimi valori, in più od in meno, di circa cm. 25.

(1) I valori delle portate sono calcolati con riferimento all'idrometro di Boara Polesine.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di maggio è superiore alla normale. Le differenze sono comprese tra 3° a Vercelli, 3° a Rovigo e 2° a Venezia.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Vercelli	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	29,4	33,2	33,0	33,0	28,6	34,9	34,2	35,5
Minima . . .	7,1	4,5	6,1	2,9	0,8	3,6	5,4	6,1
Media mensile .	20,0	19,2	19,3	19,2	17,0	20,4	[17,3]	[17,7]
Valore normale	17,5	16,6	17,2	17,0	13,8	17,3	14,1	15,5

La temperatura nel suo andamento generale, dopo aver registrato un forte minimo ai primi del mese, sale rapidamente, raggiunge un forte massimo verso la fine della seconda decade per poi diminuire e raggiungere un nuovo minimo alla metà dell'ultima decade.

La massima assoluta del mese si presenta in uno dei tre giorni dal 13 al 15 segnando valori molto alti, compresi tra 35,5 a Trento, 34,9 a Rovigo e 29,4 a Trieste, 28,6 al Vercelli.

La minima assoluta si nota in uno dei tre giorni dal 3 al 5, con valori compresi tra 0,8 al Vercelli e 7,1 a Trieste.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Vercelli (m. 575 s. l. m.), si rileva che la temperatura minima è al Vercelli superiore a quella di Padova in 17 giorni; in 11 di questi la differenza non fu inferiore a 3°; in 6 giorni, poi, non fu inferiore a 5°. La differenza più forte, 6°, si ha il 14.

Queste differenze, in tre giorni, si fanno sentire nella media giornaliera, che al Vercelli non fu inferiore a quella di Padova.

Mai la massima al Vercelli fu superiore alla massima di Padova e ciò sta a denotare che l'inversione si è avuta solo nelle ore meno calde della giornata.

Allo scopo di dare un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadi e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

REGIONE	Quota sul mare metri	Media mensile							
		16	263	521	788	1017	1300	—	—

	Media mensile . .	18,4	15,3	14,7	12,2	11,1	10,6	8,8	2,5

2) **Nebulosità.** - La media mensile della nebulosità è dappertutto inferiore al valore normale. Gli estremi delle differenze sono 0,4 a Padova e 2,4 a Rovigo.

La decade meno coperta risulta la II (media decadica tra 1,6 a Belluno e 4,4 a Padova); la decade più coperta è stata la III (media decadica 5,3 a Rovigo e 7,5 a Belluno).

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	4,4	4,1	5,9	3,5	5	5
Valore normale . .	6,0	5,8	6,3	5,9	5,8	6,6

3) **Vento.** - La media mensile della velocità del vento è stata inferiore al normale. Il vento è debole in tutto il mese; la media giornaliera ha superato i 20 km/ora per due volte a Venezia, raggiungendo un massimo il giorno 22 con km/ora 27,9, direzione prevalente occidentale.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	4,1	10,0	12,4	5,1	5
Valore normale . .	9,9	12,4	14,7	6,1	6,5

4) **Pressione atmosferica (1)** - La media mensile della pressione atmosferica è mm. 759,7; essa è inferiore al valore normale di mm. 0,9.

L'altezza massima, di mm. 767,3, si registra alle 12^h dell'11; l'altezza minima, mm. 751,1, alle 13^h del 22: si ha quindi, una escursione di mm. 16,2, che è uguale all'escursione media di maggio.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA						SALITA					
Giorno	Ora	Durata ore	Pressione		Differenza totale mm.	Differenza oraria mm.	Giorno	Ora	Durata ore	Pressione	
			Da mm.	A mm.						Da mm.	A mm.
26	2	6	755,3	752,3	3,0	0,5	24	17	6	753,7	756,9
25	11	21	758,1	757,5	0,6	0,3	3	6	20	757,2	764,6

5) **Precipitazioni atmosferiche.** - Continua nei primi giorni del mese il periodo di precipitazioni iniziato verso la fine del mese precedente; ma, tranne che in qualche località del Friuli, (nei giorni pl. 2 caddero mm. 59,4 a Tarvisio, mm. 55,8 a Pesariis, mm. 46,8 a Tramonti di Sopra) nel rimanente della regione esse sono deboli. Col 6 ha inizio un periodo asciutto, che in generale, si protrae fino al 15-16. Dopo tale giorno si notano precipitazioni parziali, che si fanno quasi generali il giorno 23. Piogge notevoli: il 23 (gpl.) a S. Nicolò in Vizzè (Alto Adige) mm. 86,5 - totale giornaliero massimo della regione -; il 31 (gpl.) mm. 72,0 a Poffabro, mm. 80,4 a Rosara di Codevigo.

Dal confronto tra il totale mensile e il valore normale risulta che il primo è inferiore al secondo: i rapporti sono compresi fra 0,79, a Trieste, e 0,26, a Rovigo.

Dall'ispezione alla carta delle precipitazioni mensili appare come i 200 mm. siano stati superati in vari posti; una zona di massimo si ha tra l'Isonzo e il Torre attorno al Monte Canin (Resia mm. 233, Musi mm. 254); una seconda attorno a Monte Cucco (Drenchia mm. 265, Clodig mm. 277).

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido) e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	62,3	80,6	41,6	64,8
Valore normale	79,0	147,9	87,2	97,2
Rapporto . . .	0,79	0,54	0,48	0,67

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	18,0	5	59,0	6,0
Valore normale	70,1	148,3	117,6	34,0
Rapporto . . .	0,26	—	0,50	0,57

totale mensile massimo della regione - Montemaggiore mm. 272) e infine una terza sull'alto Meduna (Poffabro mm. 233).

Meno di 100 mm. si notano in tutta la pianura dall'Isonzo al Po e, nella zona montuosa, sul bacino dell'Adige.

A nord di Bolzano sono superati i 100 mm. (mm. 152 a Colle Isarco, mm. 179 a Fleres).

Le quantità minime si rilevano nella media Val Venosta (Silandro mm. 34) e nella pianura veneta a sud del Bacchiglione (Ostiglia mm. 36, Rovigo mm. 18).

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli dei corsi d'acqua è vario durante il mese, ciononostante i valori massimi e minimi si presentano in giorni diversi a seconda del corso d'acqua. In ogni caso, però, data la lieve entità delle precipitazioni del mese, le escursioni dei livelli sono contenute in limiti modesti.

Solo per l'Adige si nota un aumento delle altezze idrometriche dall'inizio alla fine del mese e ciò per effetto precipuo dello scioglimento delle nevi e delle prime ablazioni glaciali.

Nel seguente prospetto, per i principali corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km ²	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.
Tagliamento	Pioverno	1900	20	99	85,7	31	82	59,0
Piave	Segusino	3333	2	164	129	6	116	39,3
Bacchiglione	Montegaldella	1384	7	54	18,3	20	4	8,4
Adige	Boara Pisani	11954	24	5	367 ⁽¹⁾	7	5	147 ⁽¹⁾

MAREOGRAFIA.

La marea registrata nel bacino di S. Marco (Punta della Salute) presenta lievi scostamenti generalmente positivi rispetto alle previsioni nei giorni 1-2 e dal 20 alla fine del mese. Negli altri giorni si registrano altezze di marea inferiori al previsto.

Gli scostamenti, sia positivi che negativi, superano raramente e di poco il valore di cm. 20.

(1) I valori delle portate sono calcolati con riferimento all'idrometro di Boara Poliese.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) *Temperatura.* - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile è superiore alla normale. Le differenze sono comprese tra 3,3 al Venda, a Rovigo, a Belluno e 2,1 a Padova.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	33,2	33,5	32,3	33,1	30,3	34,9	33,8	35,6
Minima . . .	12,8	11,9	14,3	11,4	9,7	14,2	7,9	9,3
Media mensile .	23,5	23,2	23,3	23,0	20,9	24,6	21,1	22,1
Valore normale	21,1	20,2	21,0	20,9	17,6	21,3	17,8	19,5

La temperatura nel suo andamento generale, dopo d'aver segnato un notevole minimo tra la fine del mese precedente e il principio di giugno, sale rapidamente, raggiunge un notevole massimo verso la fine della I decade per poi diminuire e raggiungere un altro minimo alla metà della II decade. Un massimo relativo è registrato verso la metà della III decade.

La massima assoluta del mese si nota il 9 a Venezia, a Trieste e a Rovigo; il 20 a Udine, il 25 altrove, segnando valori molto elevati, compresi tra 35,6 a Trento, 34,9 a Rovigo e 33,2 a Trieste, 30,3 al Venda.

La minima assoluta si registra il giorno 1 a Trento, a Belluno, a Padova; il 2 a Rovigo, il 13 altrove con valori compresi tra 7,9 a Belluno e 14,3 a Venezia.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 20 giorni; in 12 di questi la differenza non è inferiore a 3°; in 3 giorni, poi, raggiunge o supera i 5°. La differenza più forte, 5°, si ha il giorno 8.

La massima al Venda non ha mai superato quella di Padova; ciò indica che l'inversione è durata solo nelle ore meno calde della giornata.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del Compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione, distribuite in vari gruppi secondo la loro quota.

	Media mensile . .	22,5	19,6	18,6	15,9	14,1	14,2	12,1	6,5	—							

2) *Nebulosità.* - Nella media mensile la nebulosità è dappertutto inferiore al valore normale. Gli scostamenti sono compresi tra 1,0 a Trento e 2,8 a Rovigo.

La decade meno coperta è stata la I (media decadica tra 0,5 a Rovigo e 3,9 a Trento); la più coperta è stata la III (media decadica fra 3,0 a Rovigo e 5,8 a Padova).

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	3,3	2,9	4,6	1,8	3,7	4,8
Valore normale . .	4,8	5,0	6,2	4,6	5,3	5,8

3) *Vento.* - La media mensile della velocità del vento risulta inferiore al normale, ad eccezione della vallata dell'Adige. La media giornaliera ha superato i 20 km/ora per due volte a Venezia, raggiungendo un massimo nella media giornaliera del giorno 13, con km/ora 28,6 e direzione prevalente orientale.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	5,4	10,9	12,0	5,6	7,9
Valore normale . .	10,4	12,4	14,3	5,8	6,7

4) *Pressione atmosferica (1)* - La media mensile della pressione atmosferica è mm. 762,2: essa supera il valore normale di mm. 1,4.

L'altezza massima, di mm. 768,7, si nota alle 11^h del 18; l'altezza minima, mm. 751,7, alle 6^h del 29. Ne risulta quindi una escursione di mm. 17,0, che è superiore all'escursione media di giugno.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA								SALITA							
Giorno	Ora	Durata ore	Pressione		Differenza totale mm.	Differenza oraria mm.		Giorno	Ora	Durata ore	Pressione		Salita totale mm.	Salita oraria mm.	
			Da mm.	A mm.							Da mm.	A mm.			
26	4	2	764,0	761,9	2,1	1,1		13	20	3	761,9	764,6	2,7	0,90	
26	13	26	764,2	754,7	9,5	0,37		17	5	29	762,1	769,0	6,9	0,24	

5) *Precipitazioni atmosferiche.* - Nel mese si rilevano tre periodi piovosi, a piogge in generale sparse, distaccati da due brevi periodi asciutti: il primo dal 6 al 9, il secondo dal 18 al 21. Degne di nota le precipitazioni: del 10 (g.pl.) a Clauzetto mm. 32,2, a Gosaldo mm. 34,5, a S. Leonardo (Badia) mm. 28,0, a Predazzo mm. 15,8; l'11 a Saletto (Piave) mm. 77,3 - totale giornaliero massimo del mese -, a Rovigo mm. 75,0; il 12 (g.pl.) a Riva di Tures mm. 35; il 26 (g.pl.) a Soverzene (Piave) mm. 71; il 26 a Pedesalto mm. 40,2, ad Asiago mm. 23,2.

Dal confronto tra il totale mensile e il valore normale risulta che il primo è, in generale, inferiore al secondo (rapporto: 0,86 a Belluno, 0,28 a Padova, 0,16 a Udine).

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	42,5	25,2	17,6	25,2
Valore normale	96,4	157,3	89,3	91,7
Rapporto . .	0,44	0,16	0,20	0,28

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	83,6	105,2	15,2	26,4
Valore normale	65,6	123,1	91,8	51,0
Rapporto . .	1,27	0,86	0,17	0,52

Dall'ispezione alla carta delle precipitazioni mensili appare come i 200 mm. sono superati in una ristretta area nell'alto bacino del Meduna (Chievolis mm. 215 - totale mensile massimo della regione).

Caddero meno di 50 mm. in tutta l'Istria (Levade mm. 26, a Pinquente mm. 18), nella pianura Veneta a sud del Piave (Este mm. 19, Ostiglia mm. 15) e nella zona montuosa in destra dell'Adige (Brentonico mm. 20, Cles mm. 37, Silandro mm. 26).

REGIME DEI CORSI D'ACQUA.

I livelli dei corsi d'acqua della regione presentano, in generale, lievi aumenti in corrispondenza dei tre periodi di precipitazione e cioè: nei primi giorni del mese, intorno al giorno 11 e verso la fine del mese.

E in uno di questi giorni che si registrano i massimi valori delle altezze idrometriche.

Nel seguente prospetto, per alcuni corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km.q.	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.

Piave	Segusino . . .	3333	11	162	125	5	123	44,6
Bacchiglione	Montegaldella .	1384	27	47	17,3	25	5	8,7
Adige	Boara Pisani .	11954	12	390 (1)	15	15	230 (1)	

MAREOGRAFIA.

Durante il mese le altezze di marea registrate nel bacino di S. Marco (Punta della Salute) non presentano scostamenti notevoli sulle previsioni.

In generale tali scostamenti sono negativi fino al giorno 26 e positivi verso la fine del mese, con valori che raggiungono i 20 ÷ 25 centimetri.

(1) I valori delle portate sono calcolati con riferimento all'idrometro di Boara Pollesine.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali, e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di luglio è superiore alla normale. Le differenze sono comprese tra 3° a Trento, 2° a Belluno e 1° a Trieste.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	36,5	36,0	34,0	37,4	32,8	36,3	36,6	38,9
Minima . . .	12,9	11,4	13,8	11,5	9,8	12,5	6,9	10,5
Media mensile .	25,1	25,0	25,1	25,4	22,7	26,1	23,3	24,8
Valore normale	24,0	22,9	23,6	23,5	20,4	24,1	20,5	21,8

La temperatura nel suo andamento generale, dopo aver registrato un forte minimo ai primi del mese, sale progressivamente per mantenersi pressoché costante nell'ultima decade.

La massima assoluta del mese si presenta il 29 a Venezia, il 26 ad Udine, dal 20 al 23 altrove segnando valori molto alti, compresi tra 38° a Trento, 37° a Padova, 36° a Trieste e 32° a Venda.

La minima assoluta si nota in uno dei tre giorni dall'1 al 5, con valori compresi tra 6° a Belluno e 13° a Venezia.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 16 giorni; in 3 di questi la differenza non fu inferiore a 3°. La differenza più forte (4°) si ha al 24.

Mai la massima al Venda fu superiore alla massima di Padova e ciò sta a denotare che l'inversione si è avuta solo nelle ore meno calde della giornata.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

2) **Nebulosità.** - La media mensile della nebulosità è dappertutto inferiore al valore normale. Gli estremi delle differenze sono 0,7 a Padova e 1,4 a Belluno.

La decade meno coperta risulta la III (media decadica tra 0,9 a Venezia e 3,0 a Trento); la decade più coperta è stata la I (media decadica 4,1 a Trieste e 6,0 a Padova).

Valore normale .	3,6	3,4	4,3	3,1	4,5	4,9

3) **Vento.** - La media mensile della velocità del vento è stata inferiore al normale. Il vento è debole in tutto il mese; la media giornaliera ha superato i 20 km/ora per una volta a Venezia e due volte a Udine, raggiungendo il massimo di km/ora 50 a Venezia il giorno 2, direzione ENE, ed il 31 a Udine da S.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	5,9	12,1	11,5	0	8,3
Valore normale . . .	10,1	12,7	14,1	5,5	6,7

4) **Pressione atmosferica (1).** - La media mensile della pressione atmosferica è mm. 759,8; essa è inferiore al valore normale di mm. 0,8.

L'altezza massima di mm. 763,2 si registra alle 13^h del 24; l'altezza minima, mm. 751,6, alle 16^h del 2; si ha quindi una escursione di mm. 11,6, che è inferiore all'escursione media 13,8 di luglio.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA							SALITA						
Inizio		Durata ore	Pressione		Discesa totale mm.	Discesa oraria mm.	Inizio		Durata ore	Pressione		Salita totale mm.	Salita oraria mm.
Giorno	Ora		Da mm.	A mm.			Giorno	Ora		Da mm.	A mm.		
30	13	3	760,8	757,4	3,4	1,1	2	20	4	753,0	756,0	3,0	0,75
30	11	32	761,5	751,2	10,3	0,33	11	16	34	755,0	763,2	8,2	0,24

5) **Precipitazioni atmosferiche.** - Nel mese si rileva, in tutta la regione, un periodo asciutto che va dal 13 al 17; ci sono anche altri giorni senza precipitazione, sparsi nel corso del mese. Degne di nota le precipitazioni: del 2 (g.pl.) a Plezzo mm. 50,5, a Forni di Sopra mm. 34,1, a Liga mm. 90,0; del 3 (g.pl.) ad Ampezzo mm. 37,7, a Tramonti di Sopra mm. 31,6, a Predazzo mm. 24,0; dell'11 (g.pl.) ad Asiago mm. 63,2; del 13 (g.pl.) a Tomba di Meretto mm. 110,3 - totale giornaliero massimo del mese -, a Basiliano mm. 82,5, a Tramonti di Sopra mm. 43,4, a Resia - Adige - mm. 51,4.

Il totale mensile risulta inferiore, ad eccezione di una ristretta zona nel Polesine al relativo valore normale. Il rapporto tra i due oscilla fra 0,8 (a Venezia) e 0,43 (a Silandro - Val Venosta -).

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	36,8	72,4	33,2	24,4
Valore normale	62,5	103,4	43,1	51,9
Rapporto . .	0,59	0,70	0,80	0,47

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	27,2	89,2	47,0	26,4
Valore normale	26,9	118,3	91,0	62,0
Rapporto . .	1,10	0,75	0,50	0,43

Dall'ispezione alla carta delle precipitazioni mensili appare come i 200 mm. siano superati in una ristretta area attorno a Montebelluna (Isonzo) dove si sono registrati mm. 205,3 - totale mensile massimo della regione -. Numerose sono le aree lungo la fascia che dalle sorgenti dell'Agno va sino all'alto Tagliamento ed al Sella, dove caddero oltre 100 mm. La pianura, tranne la parte centrale che comprende i Colli Euganei e si spinge sino agli orli della laguna Veneta (Este mm. 108, Battaglia mm. 107, Piove di Sacco mm. 111, Lora mm. 106, Montagnana mm. 57) ha meno di mm. 50.

Anche le coste occidentali dell'Istria hanno meno di 50 mm. (Dignano mm. 31).

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli idrometrici durante il mese è in diretta dipendenza delle precipitazioni: le massime altezze idrometriche si registrano in corrispondenza dei periodi piovosi del 2 ÷ 4 o del 10 ÷ 12. I livelli minimi si riscontrano in giorni vari del mese.

Nel seguente prospetto, per i principali corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi giornalieri delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km. q.	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.

Piave	Segusino . . .	3333	3	154	108	17	118	37,7
Bacchiglione	Montebelluna .	1384	3	35	15,2	30	15	7,6
Adige	Boara Pisani .	11954	13	100	238 (1)	9	175	136 (1)

MAREOGRAFIA.

Le altezze di marea registrate nel bacino di S. Marco (Punta della Salute), in generale, sono superiori al previsto nella prima metà del mese con scostamento massimo di circa cm. 25 il giorno 2. Nel resto del mese le maree presentano leggeri scostamenti negativi più sensibili nei giorni 20 ÷ 22.

(1) I valori delle portate sono calcolati con riferimento all'idrometro di Boara Polesine.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di agosto è per lo più superiore alla normale. La differenza è di pochi decimi: negativi a Treviso e al Venda, positivi altrove, tra 0,3 a Rovigo e 1,1 a Belluno.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	30,6	30,6	30,8	33,6	28,3	32,2	32,1	33,4
Minima . . .	17,0	15,3	17,3	14,0	10,7	16,2	10,2	11,3
Media mensile .	24,0	22,5	23,6	22,9	19,7	23,3	20,8	21,5
Valore normale	23,4	22,1	22,8	22,5	20,0	23,0	19,7	20,9

La temperatura nel suo andamento generale, dopo il massimo di luglio, si mantiene più bassa, presentando due massimi relativi di qualche importanza: uno nella prima, l'altro nella terza decade.

La massima assoluta del mese si presenta il 4 a Trento, l'8 a Trieste, dal 29 al 31 altrove, segnando valori compresi tra 33° a Padova, 33° a Trento e 28° a Venda.

La minima assoluta si nota in giorni diversi: attorno al 10 nella zona alpina, dal 20 al 24 nella pianura e lungo il mare, segnando valori compresi tra 17° a Venezia e 10° a Venda.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 10 giorni; in uno solo di questi la differenza non fu inferiore a 3°. La differenza più forte (3°,8) si ha il 30.

Mai la massima al Venda fu superiore alla massima di Padova e ciò sta a denotare che l'inversione si è avuta solo nelle ore meno calde della giornata.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione, distribuite in vari gruppi secondo la loro quota

2) **Nebulosità.** - La media mensile della nebulosità è, tranne che a Rovigo, superiore al valore normale. Gli estremi delle differenze sono 0,1 a Udine e 1,0 a Padova.

La decade meno coperta risulta la terza (media decadica tra 1,8 a Rovigo e 4,3 a Trento), la decade più coperta è stata la prima (media decadica 4,7 a Belluno e 6,4 a Padova al Venda e a Treviso).

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	4,4	4,3	5,4	3,1	4,7	5,3
Valore normale .	3,8	3,8	4,4	3,6	4,4	4,8

3) **Vento.** - La media mensile della velocità del vento in generale è stata superiore al normale. La media giornaliera ha superato i 20 km. per 6 volte a Venezia; giornata più ventosa l'8 con media 27,3 vento prevalente da ENE. La velocità oraria massima si presentò il giorno 9 a Venezia con 54 km. da WSW.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	6,1	11,7	14,7	5,4	6,7
Valore normale . .	11,4	13,0	13,8	5,1	6,3

4) **Pressione atmosferica (1).** - La media mensile della pressione atmosferica è mm. 757,3, essa è inferiore al valore normale di mm. 763,7.

L'altezza massima di mm. 763,7 si registra alle 12^h del 25; l'altezza minima, mm. 746,7, alle 20^h del 19: si ha quindi una escursione di mm. 17,0, che è superiore all'escursione media 14,6 spettante a questo mese.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita le più caratteristiche del mese.

DISCESA							SALITA						
Inizio		Durata ore	Pressione		Pressione		Inizio		Durata ore	Pressione		Pressione	
Giorno	Ora		Da mm.	A mm.	Discesa totale mm.	Discesa oraria mm.	Giorno	Ora		Da mm.	A mm.	Salita totale mm.	Salita oraria mm.

5) **Precipitazioni atmosferiche.** - Pochi i giorni in cui nel compartimento non siano avvenute precipitazioni. Degne di nota quelle del 9 (g.pl.) a Tarvisio mm. 80,4, a Chialina mm. 158,6 e mm. 155,5, a Villa Santina (Tagliamento), mm. 119,8 a Clauzetto, mm. 129,4 a Claut, mm. 110 a Pieve di Cadore, mm. 73,0 a Pedesalto (Brenta), mm. 78 ad Asiago, mm. 70,8 a Recoaro, mm. 79,4 a Predazzo, mm. 100,0 a Badia S. Leonardo; del 10 (g.pl.) a Frasseneit mm. 200,0 - totale giornaliero massimo della regione.

Il totale mensile, nel confronto al relativo valore normale (ad eccezione di Trieste e della pianura Padova-Vicenza), risulta superiore; il rapporto tra i due è compreso tra 2,61 a Plezzo e 1,62 a Treviso.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	64,0	169,6	24,2	61,0
Valore normale	71,0	125,6	74,3	63,8
Rapporto . .	0,90	1,35	0,33	0,96

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	94,8	219,0	183,2	88,6
Valore normale	53,5	113,5	88,3	64,0
Rapporto . .	1,77	1,92	2,10	2,38

Dall'ispezione alla carta delle precipitazioni mensili appare come i 200 mm. siano superati in una larga area montuosa compresa fra una linea che partendo dal Lago di Garda e passando per le prealpi Veneto-Friulane termina alle sorgenti dell'Idria; e un'altra che dalle sorgenti dell'Aurino attraversa Passo Rolle e Rovereto. Notevoli le precipitazioni sulle Alpi Carniche: mm. 542,4 a Clauzetto - totale mensile massimo della regione -; mm. 519 a Musi (Isonzo) e mm. 496 a Diga in Alba (Tagliamento).

La laguna Veneta e il delta del Po hanno meno di 50 mm.; Chioggia mm. 28, Cavanella Po mm. 20.

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli idrometrici durante il mese è in diretta dipendenza delle precipitazioni: le massime altezze idrometriche si notano in corrispondenza delle maggiori precipitazioni del mese che si registrano il 9 ÷ 10.

I livelli minimi si riscontrano in giorni vari del mese.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Kmq.	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.
Tagliamento	Pioverno . .	1900	10	250	1100	8	57	42,4
Piave	Segusino . .	3333	9	[310]	442	21	132	60,0
Bacchiglione	Montegaldella .	1384	9	255	81,0	1	18	6,7
Adige	Boara Pisani .	11954	10	212	1001 (1)	7	203	101 (1)

MAREOGRAFIA.

Le maree registrate durante il mese nel bacino di S. Marco (Punta della Salute) presentano in generale, ad eccezione di alcuni giorni nella prima decade ed alla fine del mese, scostamenti negativi rispetto alle previsioni.

Il difetto maggiore si nota il giorno 8 con circa cm. 40.

(1) I valori delle portate sono calcolati con riferimento all'idrometro di Boara Polesine.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) *Temperatura.* - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di settembre è superiore alla normale. La differenza è di 0,8 a Trieste e di poco superiore al grado altrove.

Temperatura								
Massima . . .	29,3	29,6	30,3	31,6	26,7	30,5	30,2	30,4
Minima . . .	13,0	9,4	12,0	7,7	7,3	8,8	3,9	8,1
Media mensile .	20,7	19,6	20,6	19,9	17,5	20,4	17,7	18,3
Valore normale	19,9	18,2	19,4	18,6	16,5	19,2	16,5	17,3

La temperatura ha andamento generale decrescente, brevemente interrotto da un massimo relativo tra la II e la III decade.

La massima assoluta del mese si è presentata in uno dei tre giorni 3-4-5, segnando valori compresi tra 31,6 a Padova, 31,3 a Treviso e 26,7 al Venda.

La minima assoluta è stata segnata in uno dei seguenti giorni: il 25 lungo il mare, il 27 nella pianura veneta, il 30 nella zona alpina, segnando valori compresi tra 13,0 a Trieste e 3,9 a Belluno.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 19 giorni; in 4 di questi giorni la differenza fu superiore a 3°; massima differenza il giorno 27 con 4°,1.

Mai la massima al Venda fu superiore a quella di Padova e ciò sta a denotarci che l'inversione è durata solo una parte della giornata, nelle ore meno calde.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione, distribuite in vari gruppi secondo la loro quota

VENEZIA GIULIA	Quota sul mare metri

2) *Nebulosità.* - La media mensile della nebulosità è inferiore al valore normale. Gli estremi delle differenze sono 0,4 a Padova e a Treviso e 1,3 a Venezia. Piccola la differenza tra decade e decade; per lo più la III decade fu la più coperta, la II la meno coperta.

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	3,5	3,5	5,1	3,4	4,4	4,8
Valore normale . .	4,6	4,8	5,5	4,5	5,1	5,4

3) *Vento.* - La media mensile della velocità del vento, in generale, è stata inferiore alla normale. La media giornaliera ha superato i 20 km/ora per 4 volte a Venezia; giornata più ventosa il 24 con media 23,5 km/ora, vento prevalente dal III quadrante. La velocità oraria massima si presentò l'11 e il 29 con 46 km/ora da SSE la prima volta; da SE la seconda.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	8,1	11,3	12,8	7,1	6,3
Valore normale . . .	12,1	13,9	13,9	4,8	5,7

4) *Pressione atmosferica (1).* - La media mensile della pressione atmosferica è mm. 762,1, inferiore al suo valore normale di mm. 0,2.

L'altezza massima fu di mm. 770,5 alle 23^h del 30; l'altezza minima mm. 751,0 alle 19^h del 24; si ha quindi una escursione di mm. 19,5, che è leggermente superiore alla escursione media 17,7 che spetta a questo mese.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA						SALITA					
Inizio		Durata ore	Pressione		Discesa totale mm.	Discesa oraria mm.	Inizio		Durata ore	Pressione	
Giorno	Ora		Da mm.	A mm.			Giorno	Ora		Da mm.	A mm.
24	3	5	754,1	751,9	2,2	0,44	19	19	6	759,9	762,5
22	22	34	760,9	751,9	9,0	0,26	10	8	30	756,2	764,7
										8,5	0,28

5) *Precipitazioni atmosferiche.* - In un primo periodo piovoso, che va dal 5 al 10, le precipitazioni in generale sono scarse e parziali; furono generali solo il 6, in cui a Trieste caddero mm. 26,8, al Venda mm. 20,8, a Cologna V. mm. 45,6; altrove quantità inferiori. Dopo qualche pioggia scarsa e sparsa nella zona, degne di nota sono le precipitazioni del 20, generali a tutta la regione, in particolare nei bacini del Tagliamento: Diga in Alba mm. 133,6, a Moggio Udinese mm. 135,6 - totale giornaliero massimo della regione -, a S. Francesco mm. 101,9, a Venzone mm. 68,8. Dopo un paio di giorni asciutti segue un periodo di 3 giorni (23 ÷ 25) a precipitazioni pressoché generali. Degne di nota le precipitazioni del giorno 24: mm. 34,2 a Belluno, mm. 33,2 a Tai di Cadore il 24 (gp.): mm. 92,0 a Tramonti di Sopra, mm. 52,2 ad Asiago, mm. 30,5 a Recoaro, mm. 39,6 a Riva di Tures.

Il totale mensile nel confronto al relativo valore normale risulta inferiore; il rapporto tra i due è compreso tra 0,25 nella Venezia Euganea, 0,79 nella Val Venosta e 0,85 a Trieste.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	88,7	56,4	17,4	19,6
Valore normale	103,6	143,4	78,9	74,2
Rapporto . .	0,85	0,39	0,22	0,27

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	16,0	68,8	65,8	32,4
Valore normale	53,1	125,4	96,4	41,0
Rapporto . .	0,30	0,55	0,68	0,79

Dall'ispezione alla carta delle precipitazioni mensili (1) appare come i 200 mm. siano stati superati in una non larga area a nord della confluenza Fella-Tagliamento, dove a Diga in Alba caddero mm. 304 - totale mensile massimo della regione -, mm. 299 a Moggio Udinese, mm. 280 a S. Francesco, mm. 204 a Tolmezzo. Altra area con oltre 200 mm., più ristretta della precedente, comprende l'alta Val d'Astico (Velo mm. 253). Caddero oltre 100 mm. in tutte le Alpi orientali; l'isoleta 100 costeggia le prealpi friulane, le taglia alla confluenza del Cimoliana col Cellina, per raggiungere il Cordevole e di qui, procedendo verso nord, raggiunge il confine. Val Venosta con la regione ad W di Bolzano ha meno di 50 mm. (Silandro mm. 32). Tutta la pianura Veneta attorno ai Colli Euganei e la Laguna hanno meno di 25 mm.: Vicenza mm. 12, Venda mm. 19, Ostiglia mm. 12. Durante il periodo piovoso dal 24 sulle montagne dell'alto Adige cadde neve mista a pioggia.

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli idrometrici durante il mese è in diretta dipendenza delle precipitazioni: le massime altezze idrometriche si notano in corrispondenza delle maggiori precipitazioni del mese che si registrano il 20 ÷ 26 nei bacini del Tagliamento, Piave, Bacchiglione, e nei primi giorni sull'Adige.

I livelli minimi si riscontrano in giorni diversi della seconda metà del mese.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Kmq.	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.
Tagliamento	Pioverno . .	1900	26	169	428	15	49	38,9
Piave	Segusino . .	3333	24	176	154	22	119	41,2
Bacchiglione	Montegaldella .	1384	21	23	13,1	23	16	7,0
Adige	Boara Pisani .	11954	2	84	260	26	181	129

MAREOGRAFIA.

La marea registrata durante il mese nel bacino di S. Marco (Punta della Salute), oscilla in generale, intorno alle altezze previste: gli scostamenti sono contenuti entro valori di 10 ÷ 20 cm., generalmente negativi dall'1 al 15 e dal 24 al 29, positivi negli altri giorni.

(1) Il tracciamento delle isoiete nella cartina allegata è limitato alla cosiddetta «linea Morgan» per mancanza di elementi relativi a parte della Venezia Giulia.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di ottobre è in generale superiore alla normale. La differenza è di 1° a Vercelli, 0° a Trieste e a Rovigo e di pochi decimi negativi a Vicenza e a Belluno.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Vercelli	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	21,2	21,8	21,8	24,2	18,8	22,5	23,2	22,5
Minima . . .	8,2	6,7	7,2	4,4	2,7	5,5	1,2	5,2
Media mensile .	15,1	13,9	14,8	13,5	12,3	13,9	11,4	12,4
Valore normale	15,0	13,1	14,2	13,2	11,2	13,8	11,5	12,0

La temperatura nel suo andamento generale, dopo il forte minimo verso la metà della prima decade, risale sino a raggiungere un massimo notevole al principio della seconda decade e poi lentamente discende sino alla fine del mese.

La massima assoluta del mese si è presentata l'1 lungo la Laguna, il 15 a Treviso, il 12-13 altrove, segnando valori compresi tra 25° a Treviso e 18° a Vercelli.

La minima assoluta della temperatura si nota in uno dei tre giorni dal 4 al 6, registrando valori compresi tra 8° a Trieste e 1° a Belluno.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Vercelli (m. 575 s. l. m.); si rileva che la temperatura minima è al Vercelli superiore a quella di Padova in 24 giorni; in 14 di questi giorni la differenza è superiore a 3°. La differenza massima si ha il giorno 13 con 6°.

Mai la massima al Vercelli risulta superiore alla massima di Padova e ciò sta a denotare che l'inversione si è avuta solo nelle ore meno calde della giornata.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura, ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

VENEZIA GIULIA	Quota sul mare metri	16	263	521	788	1017	1300	—	—	—

	Media mensile . .	11,9	10,2	9,4	7,2	6,0	6,1	3,3	3,2	0,7

2) **Nebulosità.** - Nella media mensile la nebulosità è inferiore al valor normale. Gli estremi delle differenze sono 0,0 a Trento, 0,3 a Trieste e a Padova, 2,8 a Belluno.

La terza decade risulta la più coperta (media decadica 8,0 a Trento e 4,2 a Belluno); la decade più serena è stata la seconda (media decadica 0,9 a Venezia e 3,2 a Trento).

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	5,3	4,0	5,5	4,0	2,1	5,3
Valore normale . .	5,6	5,5	5,8	5,3	4,9	5,3

3) **Vento.** - La media mensile della velocità del vento, a Venezia ed a Udine, è stata inferiore alla normale. La media giornaliera ha superato i 20 km/h per 5 volte a Venezia: la giornata più ventosa è stata il 30 con media km/h 34,5 e vento prevalente da SE; la velocità oraria massima si registrò il giorno 2 dalle 13^h alle 14^h, con 70 km. da SE.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	3,9	8,3	11,1	6,3	5,1
Valore normale . .	14,2	15,4	13,5	4,4	4,9

4) **Pressione atmosferica (1)** - La media mensile della pressione atmosferica è di mm. 764,7, essa è inferiore al valore normale di mm. 768.

L'altezza massima di mm. 771,2 si registra alle 12^h dell'8; l'altezza minima, mm. 754,1, alle 15^h del 27: si ha quindi una escursione di mm. 17,1 che è leggermente superiore alla escursione media di ottobre (mm. 23).

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA							SALITA						
Inizio		Durata ore	Pressione		Discesa totale		Inizio		Durata ore	Pressione		Salita totale	
Giorno	Ora		Da mm.	A mm.	mm.	mm.	Giorno	Ora		Da mm.	A mm.	mm.	mm.
24	0	29	761,8	758,9	2,9	0,10	7	16	8	761,2	767,4	6,2	0,78
24	10	21	766,1	758,0	8,1	0,39	7	5	31	758,1	771,2	13,1	0,42

5) **Precipitazioni atmosferiche.** - Nel mese si rileva un primo periodo piovoso che va dal 2 al 4 con precipitazioni scarse, prevalentemente in pianura; il 4 caddero a Venezia mm. 24,3, altrove non superarono i 10 mm. Segue un periodo, dal 5 al 23, in cui i pluviometri segnarono pochi decimi di mm. dovuti, il più, alle nebbie. Dal 23 alla fine del mese avvennero precipitazioni generali in tutta la regione. Degne di nota le precipitazioni: del 25 (g.pl.) a S. Volfango (Isonzo) mm. 91,4 - totale giornaliero massimo del mese - a Vercelli mm. 27,8, ad Asiago mm. 16,2 e mm. 31,4 a Recoaro; del 26 (g.pl.) a Montebelluna (Isonzo) mm. 68,0 e a Chiusaforte (Tagliamento) mm. 62,4; del 30 (g.pl.) a Forni di Sopra mm. 24,2 e a Pesariis mm. 41,8 e del 31 (g.pl.) a Gosol (Piave) mm. 53,0.

Il totale mensile risulta inferiore in tutta la regione, al relativo valore normale; il rapporto tra i due è compreso tra 0,14 a Padova e 0,46 a Trieste.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	51,6	23,6	37,8	12,6
Valore normale	113,0	154,1	85,7	89,0
Rapporto . .	0,46	0,15	0,44	0,14

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	21,2	30,8	26,2	15,0
Valore normale	69,1	128,5	107,3	58,0
Rapporto . .	0,31	0,24	0,25	0,26

Dall'ispezione alla carta delle precipitazioni mensili appare come i 100 mm. siano superati in diverse aree tutte molto ristrette e disseminate in vari punti della regione montuosa; nell'alto Isonzo, nell'alto Tagliamento, alle sorgenti del Meduna, del Livenza e dell'Agno. Difatti furono misurati mm. 157,6 a S. Volfango - totale mensile massimo della regione - mm. 130,3 a Montebelluna (Isonzo), mm. 130,8 a Chievolis (Livenza), mm. 115,0 a Lambre d'Agno. Caddero meno di 25 mm. in tutta la pianura ad ovest del Tagliamento e nella zona montuosa attorno a Bolzano, comprendente il bacino dell'Isonzo e degli altri affluenti dell'Adige a nord di Bolzano.

Il giorno 3 del mese la neve comparve a quote superiori ai 1500 m., quasi sempre accompagnata ad acqua, ma coprì il suolo di un sottile strato che raggiunse i 12 cm. a Riva di Tures e durò per un paio di giorni prima di sciogliersi.

Analoga comparsa, ancora più breve, si verificò alle stesse quote il giorno 25.

REGIME DEI CORSI D'ACQUA.

In relazione all'andamento ed alle intensità delle precipitazioni i corsi d'acqua presentano lievi variazioni durante il mese.

I massimi livelli vengono registrati all'inizio del mese od al giorno 30, mentre i minimi si notano in giorni diversi.

Nel seguente prospetto, per i principali corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Kmq.	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.

Piave	Segusino . .	3333	30	113	35,6	22	93	20,0
Bacchiglione	Montebelluna .	1384	4	25	13,5	12	20	6,4
Adige	Boara Pisani .	11954	1	158	159	25	199	106

MAREOGRAFIA.

Le altezze di marea registrate nel bacino di S. Marco (Punta della Salute) fino al giorno 20 sono inferiori alle previsioni, con scostamento massimo di circa cm. 20. Dal giorno 21 al 24 le maree di poco si scostano dal previsto, mentre dal 24 in poi gli scostamenti sono generalmente positivi, con massimo di cm. 45 circa, il giorno 29.

(1) Il tracciamento delle isoiete nella cartina allegata è limitato alla cosiddetta « linea Morgan » per mancanza di elementi relativi a parte della Venezia Giulia.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di novembre è inferiore alla normale. La differenza è di -1,2 a Vicenza e a Belluno, di -0,5 a Venezia e di -0,2 a Udine.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Temperatura								
Massima . . .	18,4	18,1	20,0	20,3	14,3	19,4	19,2	18,3
Minima . . .	3,0	-1,6	0,2	-1,8	-1,6	3,7	-4,8	-3,0
Media mensile .	9,2	8,0	8,6	7,3	5,6	10,4	4,9	5,7
Valore normale	10,5	8,2	9,1	7,9	6,4	8,1	6,1	6,4

La temperatura nel suo andamento generale è in notevole diminuzione, con continuità, salvo due minimi relativi; uno verso il 10-12, l'altro verso il 20-21.

La massima assoluta del mese si registra in uno dei tre primi giorni del mese, segnando valori compresi tra 22° a Treviso e 14° a Venda.

La minima assoluta della temperatura si registra il 22 a Padova, il 26 a Vicenza, il 29 e 30 altrove, segnando valori compresi tra 3° a Trieste e -4,8 a Belluno.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 14 giorni; in 3 di questi la differenza è superiore a 3°. La differenza più forte (5°,9) si ha il 21.

La massima al Venda è superiore a quella di Padova soltanto il giorno 30. L'inversione segnalata dalla minima è stata così persistente che in 6 giorni anche la media del Venda è superiore a quella di Padova: differenza massima il 21, con 3°,1.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

REGIONE	Quota sul mare metri	DISCESA									
		Inizio	Durata ore	Pressione		Discesa totale		Discesa oraria

	Media mensile . .	5,5	5,2	3,3	2,0	1,1	1,1	-2,5	-2,1	-4,2	

2) **Nebulosità.** - La media mensile della nebulosità è inferiore al valore normale. Gli estremi delle differenze sono -1,0 a Treviso, -1,4 a Trieste e a Padova e -2,1 a Belluno.

La prima decade è stata la più coperta: media decadica 7,4 a Trento e 4,6 a Udine; la decade più serena è la seconda: media decadica 1,2 a Belluno e 4,8 a Trieste.

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	4,9	5,2	5,1	5,6	3,0	4,5
Valore normale . .	6,3	6,3	6,5	6,9	5,1	5,7

3) **Vento.** - La media mensile della velocità del vento è leggermente inferiore alla normale. La media giornaliera a Venezia ha superato i 20 km. per sole 4 volte; la giornata più ventosa è stata il 26 con media di km. 22,7, vento prevalente da NE; la velocità oraria massima si presentò il giorno 1, dalle 10^h alle 11^h, con 56 km. da SE.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	8,5	12,4	13,5	6,4	3,7
Valore normale . .	14,5	14,8	14,0	4,3	4,7

4) **Pressione atmosferica (1).** - La media mensile della pressione atmosferica è mm. 761,8; essa è inferiore al suo valore normale di mm. 0,6.

L'altezza massima di mm. 769,3 si registra alle 10^h del 18; l'altezza minima, mm. 744,0, alle 14^h del 9; si ha quindi una escursione di mm. 25,3, leggermente inferiore alla escursione media di novembre (mm. 26,6).

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA							SALITA						
Inizio		Durata ore	Pressione		Discesa totale		Inizio		Durata ore	Pressione		Salita totale	
Giorno	Ora		Da mm.	A mm.	mm.	mm.	Giorno	Ora		Da mm.	A mm.	mm.	mm.
9	2	6	751,0	746,9	4,1	0,68	27	14	6	758,9	762,0	3,1	0,52
8	10	27	762,3	744,6	17,7	0,66	12	14	140	753,6	769,3	15,7	0,11

5) **Precipitazioni atmosferiche.** - Tranne nel periodo dal 17 al 24, in tutto il mese caddero precipitazioni in aree più o meno estese. Le precipitazioni più copiose caddero nei primi due giorni del mese. Degne di nota le precipitazioni dell'1 (g.pl.): a Padova mm. 57,6, al Venda mm. 55,2, a Belluno mm. 37,4, a Trento mm. 47,6, a Borgo Valsugana mm. 39,5, a Schio mm. 73,2, ad Asiago mm. 45,0, a Recoaro mm. 99,0 e a Lambre d'Agnè mm. 129,7 - totale giornaliero massimo della regione -; del 2 (g.pl.) a Tramonti di Sopra (Livenza), con mm. 48,2. I pluviografi registrarono in quasi tutti i giorni in vari luoghi del compartimento, tranne il periodo surricordato, quantità che raramente e di poco superarono i 10 mm.

Il totale mensile risulta inferiore ad eccezione del centro del Veneto (Padova e Venezia rapporto 1,1), al relativo valore normale.

(1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova
Precipitazioni				
Totale mensile	48,9	15,0	89,4	91,4
Valore normale	119,1	137,7	78,7	85,3
Rapporto . .	0,41	0,11	1,1	1,1

Stazione	Rovigo	Belluno	Trento	Silandro
Precipitazioni				
Totale mensile	34,6	41,2	50,2	14,6
Valore normale	59,0	122,1	103,2	33,0
Rapporto . .	0,60	0,34	0,49	0,44

Dall'ispezione alla carta delle precipitazioni mensili, appare come i 100 mm. siano stati superati in poche e ristrette zone. Di esse la più estesa comprende l'alto Chiampo, l'alto Agno (Lambre d'Agnè mm. 204,7 - totale mensile massimo della regione -), l'altopiano d'Asiago, il Grappa, e la pianura tra il Brenta e il Bacchiglione fino a Vicenza.

Nella Val Venosta, a nord ed a nord-est di Bolzano, le precipitazioni sono tra i 10 ed i 25 mm.

L'isoietta 50 partendo da poco a sud di Trento, con notevole sinuosità, procede verso nord-est sino alle sorgenti del Piave, e dai monti ad ovest del Tagliamento finisce al mare.

Alla sinistra di questa corre l'isoietta 25. La pianura Friulana e l'alto Friuli segnano le quantità più basse di precipitazione di tutto il compartimento.

Al giorno 9 cadde la neve (pochi cm.) a nord ed a nord-ovest di Trento.

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli idrometrici durante il mese è in diretta dipendenza delle precipitazioni: le massime altezze idrometriche si notano in corrispondenza delle maggiori precipitazioni che si registrano in uno dei primi tre giorni del mese.

I livelli minimi si riscontrano in giorni diversi del mese.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km ²	Massimo assoluto			Minimo assoluto

Adige	Boara Pisani .	11954	3	101	237	20	194	112

MAREOGRAFIA.

Le altezze di marea registrate nel bacino di S. Marco (Punta della Salute) presentano scostamento positivo, rispetto alle previsioni, per tutta la prima metà del mese, con valore massimo di circa cm. 35, il giorno 9. Nel resto del mese gli scostamenti sono lievi. Si hanno scostamenti negativi negli ultimi giorni.

(1) Il tracciamento delle isoiete nella cartina allegata è limitato alla cosiddetta «linea Morgan» per mancanza di elementi relativi a parte della Venezia Giulia.

CENNI SULL' ANDAMENTO DEGLI ELEMENTI METEOROLOGICI ED IDROLOGICI DURANTE IL MESE

METEOROLOGIA.

1) **Temperatura.** - Dal prospetto seguente, nel quale per i principali Osservatori della regione le medie mensili della temperatura sono poste a confronto con i rispettivi valori normali e sono inoltre riportati gli estremi termometrici mensili, si rileva che la media mensile di dicembre è superiore alla normale. La differenza è di 2,8 a Udine, 1,2 a Trieste, 0,6 a Vicenza e 0,1 a Belluno.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Venda	Rovigo	Belluno	Trento
Massima . . .	12,7	11,4	11,6	12,7	10,9	*	9,6	9,8
Minima . . .	- 0,7	- 2,0	- 0,7	- 4,3	- 4,9	*	- 5,8	- 4,1
Media mensile .	7,2	5,2	5,5	4,1	3,5	*	0,8	2,4
Valore normale	6,0	- 2,4	4,1	2,9	2,6	—	0,7	1,6

La temperatura nel suo andamento generale, dopo la diminuzione del mese precedente che, continuando, portò ad un minimo nella I decade del mese corrente, è in leggero aumento.

La massima assoluta del mese si è presentata il 4 a Trento, il 5 a Treviso, il 26 ad Udine, il 29 a Belluno e in uno dei due giorni 19-20 nel resto del compartimento, segnando valori compresi tra 13,1 a Treviso e 9,6 a Belluno.

La minima assoluta della temperatura si è presentata l'1 a Treviso e Venezia, l'8 ÷ 11 altrove, segnando valori compresi tra -0,7 a Trieste e a Venezia e -5,8 a Belluno.

Ponendo a confronto i minimi assoluti giornalieri della temperatura a Padova (m. 15 s. l. m.) ed al Venda (m. 575 s. l. m.), si rileva che la temperatura minima è al Venda superiore a quella di Padova in 17 giorni; in 3 di questi la differenza è superiore a 3°. La differenza più forte (4°,3) si ha il 2.

L'inversione segnalata dalla minima è stata così persistente che in 13 giorni anche la media giornaliera del Venda è superiore a quella di Padova con differenza massima di 2°,7 il giorno 1.

Allo scopo di fornire un'idea sull'andamento della temperatura alle varie quote, nel seguente prospetto, per ciascuna delle tre regioni del compartimento, sono riportate le medie decadiche e mensili della temperatura ottenute quali medie delle temperature rilevate in tutte le stazioni di osservazione distribuite in vari gruppi secondo la loro quota.

2) **Nebulosità.** - La media mensile della nebulosità è in quasi in tutto il compartimento superiore al valore normale.

Le differenze sono: 1,3 a Trieste, 1,2 a Vicenza e a Trento, -0,4 a Belluno e -0,5 a Rovigo.

La prima decade risulta la più serena (media decadica tra 3,5 a Belluno e 5,5 a Rovigo); la decade più coperta è stata la terza (media decadica 9,0 a Vicenza e 5,5 a Belluno).

Osservatorio	Trieste	Venezia (Lido)	Padova	Rovigo	Belluno	Trento
Nebulosità						
Media mensile . .	7,3	6,6	6,5	6,5	4,1	6,4
Valore normale . .	6,0	6,4	6,6	7,0	4,5	5,2

3) **Vento.** - La media mensile della velocità del vento è stata inferiore alla normale. La media giornaliera a Venezia ha superato i 20 km/h per 4 volte: la giornata più ventosa è stata il 9 con media km/h 56,2, vento prevalente da ENE. La velocità oraria massima si presentò il giorno 9 dalle 19^a alle 20^a, con 80 km. da ESE.

Osservatorio	Trieste	Udine	Venezia (Lido)	Padova	Trento
Velocità del vento					
Media mensile . . .	10,8	9,3	14,6	7,7	4,8
Valore normale . .	17,3	13,9	15,2	4,6	4,6

4) **Pressione atmosferica (1).** - La media mensile della pressione atmosferica è di mm. 759,6, inferiore al suo valore normale di mm. 766,6.

L'altezza massima di mm. 769,1 si registra alle 11^a del 2; l'altezza minima, mm. 749,2, alle 15^a del 25: quindi si ha una escursione di mm. 19,9, inferiore alla escursione media di mm. 6,5.

Nel seguente prospetto sono riportati i dati di due variazioni barometriche registrate in discesa e due in salita, le più caratteristiche del mese.

DISCESA						SALITA					
Inizio		Durata ore	Pressione		Differenza totale mm.	Differenza oraria mm.	Inizio		Durata ore	Pressione	
Giorno	Ora		Da mm.	A mm.			Giorno	Ora		Da mm.	A mm.
13	17	5	762,1	759,3	2,8	0,56	12	18	6	762,4	766,3
2	11	42	769,0	759,1	9,9	0,24	25	16	44	749,5	763,4

5) **Precipitazioni atmosferiche.** - Nel mese si rilevano due periodi piovosi: nel primo, più breve, di due soli giorni (3-4), si superarono i 10 mm. giornalieri solo nella parte orientale; il 4 (gp) a Rignano caddero mm. 45,8, a Plezzo mm. 25,5, a Clauzetto mm. 35,4.

Nel secondo periodo (17-26) le precipitazioni sono abbondanti specie il 19-20. Il 19 (gp) caddero a Plezzo mm. 82,5, a Recoaro mm. 80,5, a Diga Cellina mm. 278,0; il 20 (gp) a Plezzo mm. 197,5, a Tramonti di Sopra mm. 220,0, a S. Francesco (Tagliamento) mm. 280,9, a Coritis (Tagliamento) mm. 314,0 - totale giornaliero massimo della regione - a Silandro mm. 16,7. Dal 27 alla fine del mese precipitazioni pochissime, per lo più senza superare il mm., limitate a una o a poche stazioni.

Il totale mensile risulta superiore al relativo valore; normale: il rapporto è compreso tra 2,09 a Recoaro, 1,81 a Belluno e 1,04 a Rovigo.

1) I valori della pressione atmosferica qui riportati sono stati desunti dal barometrografo Agolini, in funzione presso l'Osservatorio meteorologico di Venezia (Lido), e sono ridotti a 0° ed al livello del mare.

Stazione	Trieste	Udine	Venezia (Lido)	Padova	Rovigo	Belluno	Trento	Silandro
Precipitazioni								
Totale mensile	83,3	141,8	63,4	70,6	43,4	132,6	89,6	41,1
Valore normale	75,7	101,7	53,2	63,6	41,6	73,2	53,7	30,0
Rapporto . .	1,10	1,39	1,19	1,12	1,04	1,81	1,67	1,37

Dall'ispezione alla carta delle precipitazioni mensili appare come i 100 mm. siano stati superati in una larga zona il cui il limite settentrionale parte dalle sorgenti del Noce, taglia l'Adige poco a sud della stretta di Salorno e poi raggiunge il confine politico al monte Peralba, alle sorgenti del Piave. Il limite meridionale costeggia le prealpi fino al Montello, scende in pianura, passa per la confluenza Livenza-Meduna, raggiunge il Tagliamento e continuando sulla sponda destra di questo, scende al mare. Si hanno aree di massimo notevoli con oltre 400 mm.: una sul Fella; Resia mm. 444, Coritis mm. 577 - totale mensile massimo della regione -. L'altra, a ponente della precedente, si stende sull'alto Tagliamento e sulle sorgenti del Cellina e Meduna: S. Francesco mm. 486, Avosacco mm. 485,3.

Sulla Val Venosta e sulla pianura veneta si hanno precipitazioni comprese tra 50 e 80 mm.

La neve, che nella zona alpina aveva fatto breve comparsa al principio del mese scorso (novembre), lascia presto il terreno libero e ritorna con le prime precipitazioni del corrente dicembre. Nelle alpi orientali, verso i mille metri, lo spessore al suolo raggiunge i 30 cm., poi va diminuendo successivamente sino a scomparire verso il 19-20 e riappare il 26 con 15 cm. diminuendo poi, tanto che alla fine del mese ne restano 5 cm.

Nel resto delle Alpi le prime nevicate portano uno spessore attorno ai 10 cm. a quote superiori ai 700 m. Lo spessore diminuisce ma lentamente, essendovi qualche leggero rifornimento di pochi cm. di quando in quando. Rifornimento copioso avviene il 18-19-20, per cui in questo ultimo giorno abbiamo lo spessore di 30 cm. a quote di 1000 m., 50 cm. a 1500 m., dagli 80 ai 100 cm. a 2000 m. In seguito si presentano nuovi leggeri rifornimenti.

Alla fine del mese abbiamo spessori tra i 5-10 cm. a quote di 500 m.; tra i 20 e i 40 cm. ai 1000 m.; tra i 50-60 cm. a quote verso i 1500 m.; oltre 80 cm. a quote 2000 m.; in qualche posto sono superati i 100 cm. (Passo Rolle cm. 120).

REGIME DEI CORSI D'ACQUA.

L'andamento dei livelli idrometrici durante il mese è in diretta dipendenza delle precipitazioni: le massime altezze idrometriche si notano in corrispondenza delle maggiori precipitazioni del mese che si registrano il 20 ÷ 22 mentre i livelli minimi si riscontrano in giorni diversi.

Nel seguente prospetto, per i principali corsi d'acqua della regione in sezioni caratteristiche, sono riportati i valori massimi e minimi giornalieri delle altezze idrometriche e delle portate.

CORSO D'ACQUA	STAZIONE	Bacino di dominio Km ²	Massimo assoluto			Minimo assoluto		
			Giorno	Altezza idromet. cm.	Portata mc/sec.	Giorno	Altezza idromet. cm.	Portata mc/sec.
Tagliamento	Pioverno . .	1900	20	156	*	13	52	*
Piave	Segusino . .	3333	20	265	345	11	91	18,5
Bacchiglione	Montegaldella.	1384	20	302	98,5	8	13	7,6
Adige	Boara Pisani .	11954	22	145	177	18	215	88,0

MAREOGRAFIA.

Le altezze di marea registrate nel bacino di S. Marco (Punta della Salute), salvo i primi sei giorni del mese ed i giorni 15-18, sono sensibilmente maggiori del previsto.

Lo scostamento massimo si ha il giorno 20, con circa cm. 65.

(1) Il tracciamento delle isolette nella cartina allegata è limitato alla cosiddetta «Linea Morgan» per mancanza di elementi relativi a parte della Venezia Giulia.
